

# PLAN NO. 3 – BOSTON & ALBANY RR

Old time freight house. The original 1840s railroad station has been restored and stands today as a railroad museum

A good location for a companion industry to the quarry

Lionel no. 497 coaling station

The small branch line is a great place for the quarry. I've shown an operating coal loader. An operating gantry crane is also a good choice

Although this is a mountainous region (rounded, forested hills are in order), there are no tunnels in this area. However, do plan for rock cuts and high fills

Lionel no. 37124 operating sawmill
