

1:20.3 one-horse shay

by Ted Stinson | Wiscasset, Maine

If you are modeling a railroad in the period prior to 1920, you will need a supply of horse-drawn vehicles. This is the second of several to be offered.

The one-horse shay was the classic light transport (two or fewer passengers) of its day. The prototype for this shay was built of native woods and finished black with red wheels. It is on display at the Boothbay Railway Museum. The wheels for this vehicle are made of laser-cut ply and are available as a separate item from Northeast Narrow Gauge (www.nemodel.com).

Construction

Begin construction by cutting out the "print wood" parts. The print-wood pattern can be copied and glued to firm balsa or ply. Balsa will be the easiest material to cut.

Begin by assembling the seat. Sand the edges smooth and add the .04"-diameter wire handrails. Give the seat at least two coats of spray lacquer. Make the seat cushions from balsa. Add the pins and seal with clear lacquer. Paint the cushions black. Do not glue the cushions in place until the body has been painted. Now make the floor and mud guard. Seal this with clear lacquer before painting. When dry, attach the seat.

Now make the frame. Since the frame is made of dissimilar materials, use CA cement for assembly. Start with a $\frac{1}{8}$ "-square x $1\frac{3}{16}$ " piece of pine. Drill $\frac{1}{16}$ "-diameter holes where needed. Glue the $\frac{1}{32}$ " ply semicircle piece in place. Add the tube and the rear axle, followed by the flat-wire springs and step. The round steps can be made from small cardstock discs. When this has fully dried, paint the frame black.

Next, make the front axle and the shafts. Since this assembly is made of dissimilar materials, use CA cement for assembly. The assembly should also be painted black. When dry, attach the front axle to the frame with a pin through the ply semi-discs.

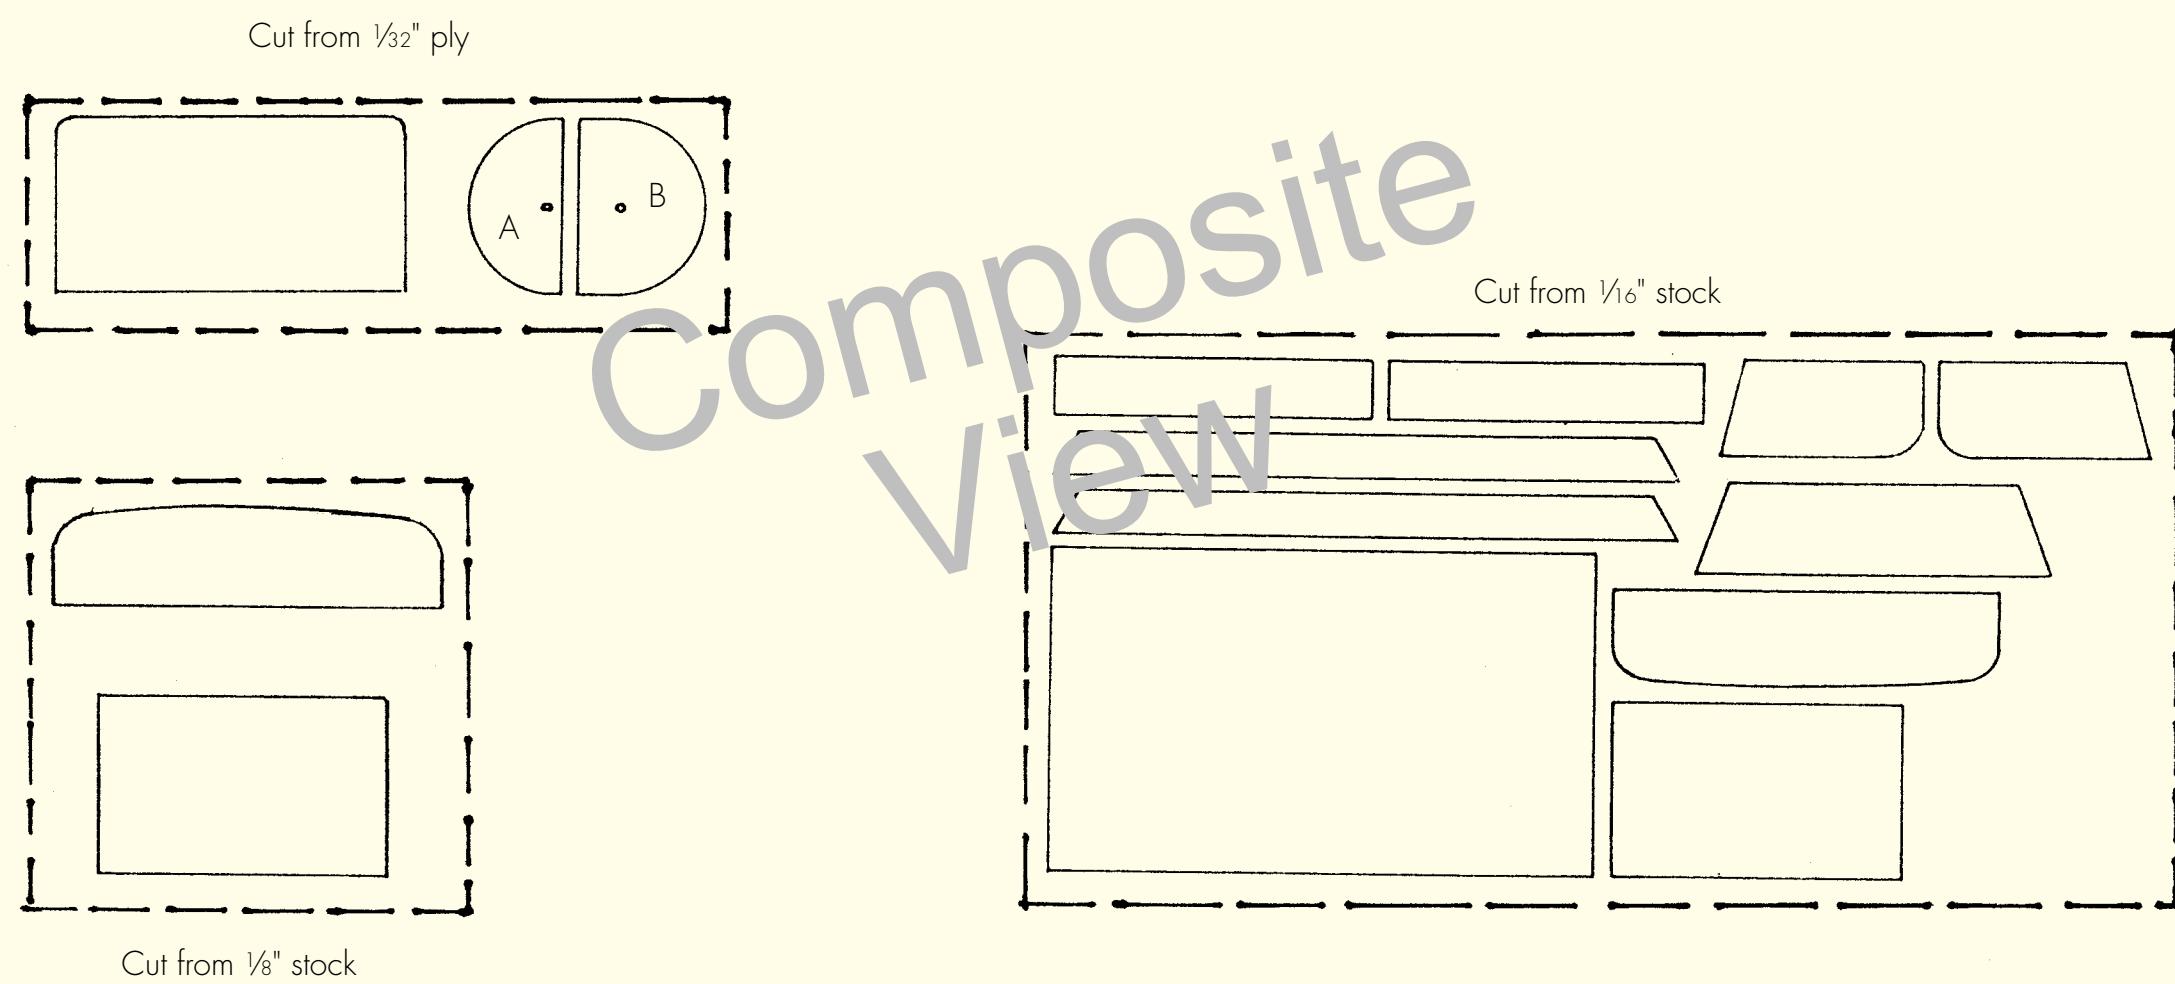

Assemble the wheels. Seal and paint these red. Wheels can be fitted on the axles, and the small eyelet that holds them in can be glued to the ends of the axles.

While the one-horse shay was a small vehicle, a Morgan horse was often used to pull it. One possibility is a Breyer "Paddock Pal" Morgan, available from toy stores, tack shops, or online.

This sheet is a supplement to the December 2005 issue of *Garden Railways* magazine. While supplies last, extra copies of these drawings can be had by sending \$1.50 per set (\$2.00 foreign) to: Sidestreet Banneworks, PO Box 460222, Denver CO 80246 USA. A complete list of available plans can be found at www.sidestreet.info, or send a stamped, self-addressed envelope to the above address.

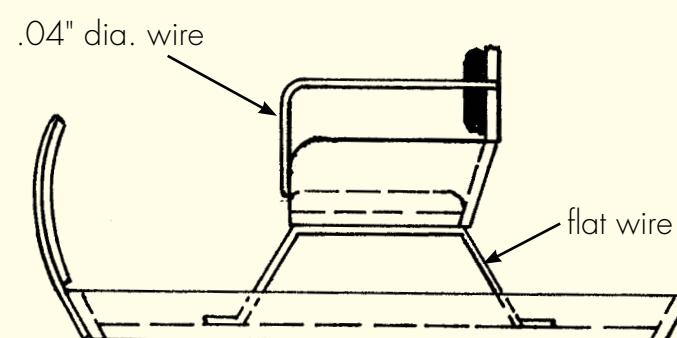

Laser-cut wheels for this project are available from Northeast Narrow Gauge for \$6 + \$2.50 shipping for a set of four. If you would like a complete one-horse shay kit (including wheels, less horse), it is available for \$25 + \$6 s&h. Order from Northeast Narrow Gauge, PO Box 191, Wiscasset ME 04578. 1:20.3 one-horse shay

by Ted Stinson | Wiscasset, Maine

If you are modeling a railroad in the period prior to 1920, you will need a supply of vehicles. This is the second of several to be offered.

The one-horse shay was the classic light transport (two or fewer passengers) of its day. This shay was built of native woods and finished black with red wheels. It is on display at the New England Railway Museum. The wheels for this vehicle are made of laser-cut ply and are available from Northeast Narrow Gauge (www.nemodel.com).

Construction

Begin construction by cutting out the "print wood" parts. The print-wood pattern is glued to firm balsa or ply. Balsa will be the easiest material to cut.

Begin by assembling the seat. Sand the edges smooth and add the .04"-diameter wire seat pins. Glue the seat cushions from balsa. Add the pins and lacquer. Paint the cushions black. Do not glue the cushions in place until the body has been assembled. Make the floor and mud guard. Seal this with clear lacquer before painting. When dry, attach the floor to the body.

Now make the frame. Since the frame is made of dissimilar materials, use CA cement for assembly. Start with a $\frac{1}{8}$ "-square x $1\frac{13}{16}$ " piece of pine. Drill $\frac{1}{16}$ "-diameter holes where needed and add the semicircle piece in place. Add the tube and the rear axle, followed by the flat-wire spring. Round steps can be made from small cardstock discs. When this has fully dried, paint the frame.

Next, make the front axle and the shafts. Since this assembly is made of dissimilar materials, use CA cement for assembly. The assembly should also be painted black. When dry, attach the front axle to the frame with a pin through the semi-discs.

Assemble the wheels. Seal and paint these red. Wheels can be fitted on the axles, a thin wire or pin that holds them in place can be glued to the ends of the axles.

While the one-horse shay was a small vehicle, a Morgan horse was often used to pull it. A Breyer "Paddock Pal" Morgan, available from toy stores, tack shops, or online.
