

Covered loading platform in 1:29 scale

Photo and drawings by Edward Steinberg

Reproduced from the January 1976 issue of *Model Railroader*

This small loading dock existed in Pine Bush, New York. It was used to off-load aluminum ingots on their way to an aluminum mill. Naturally, a similar structure could be used to serve any industry on your railroad.

The building can be easily built of strip-wood that you cut yourself or buy commercially. For outdoor use, cedar or redwood would be the woods of choice. Because of its simple design, the dimensions of the structure can be changed at will to suit local conditions.

Are you working in a different scale?

If you're not working in 1:29 scale, print the drawings out at the percentage given below for your scale.

1:32 scale	91%
1:24 scale	121%
1:22.5 scale	129%
1:20.3 scale	143%
1:19 scale	153%
1:13.7 scale	212%
